

Life Long Learning

Istinye University Continuing Education Center (ISUSEM), by analyzing individual and institutional needs with the education quality and strong academic staff of Istinye University, which takes the knowledge and experience of the MLP Care group for 25 years; it organizes trainings in order to make a difference in the field, to bring their skills to the highest point, and to benefit the participants who want to compete at national and international level.

Based on the vision of lifelong learning, ISUSEM offers its participants trainings that will enable them to improve themselves both professionally and individually.

With trainings covering many different areas from the health sector to marketing, from technology to foreign languages, it is ensured that the participants have sufficient knowledge about the subject and are certified. The basic characteristic of ISUSEM Training Programs is that the information is up-to-date. In today's world where knowledge gets old very quickly, ISUSEM provides the participants with the most up-to-date training content and supports it with its expert instructor staff.

Along with the academic staff of Istinye University, sector professionals also provide training within the body of ISUSEM. Face-to-face, applied or online trainings are collected under 4 main headings.

1. Certificate programs
2. Short-term training programs
3. Free education programs organized to contribute to society
4. International programs

Certificate programs: These are applied programs aiming to gain a level of expertise in the relevant field, with 80% attendance requirement and 70% success requirement.

Short-term training programs: These are programs that aim to raise awareness in the relevant field and allow participants to improve themselves.

Free education programs organized to contribute to society: These programs are organized free of charge in many areas to raise public awareness, frequently organized by ISUSEM for social responsibility.

International programs: These are short and long-term programs specially prepared for foreign students in many fields, especially in the field of health.
