

Medical Biology and Genetics (Master) (with Thesis)			
Master	TR-NQF-HE: Level 7	QF-EHEA: Second Cycle	EQF-LLL: Level 7

## Program Information

Genetics has made tremendous progress in the last century, continues to develop by gaining momentum thanks to multidisciplinary studies carried out together with branches of science such as medicine, molecular biology, biochemistry, physiology, medicine, agricultural, forensic, veterinary, engineering and many other fields. Medical Biology and Genetics are also in the field of health and are constantly in contact with elbows for diagnostics and treatment with gynecological diseases such as obstetrics and gynecology, oncology, hematology, urology, rheumatology and immunology. Early diagnosis, prenatal genetic diagnosis and preimplantation genetic diagnosis are very important for genetic diseases that can be treated or not.
